▶ Feature:

1. FionTu Intelligence - Multimedia Conference Intelligent Interactive Screen Service Software mainly manages and controls video streams in a unified manner

2. Realizes the function of converting videos from external cameras, PCs and other video devices into network video streams through professional acquisition equipment

3. Realizes screen sharing, interactive collaboration, multimedia content display and other functions

4. Solve the problem that conference rooms cannot share displays and occupy a large number of devices. Technically, it mainly uses dedicated video acquisition equipment to convert analog videos into network video streams, transmit video data through the network to any node that needs to be displayed, and can be saved in real time for viewing

5. The system adopts a modular programming structure, which is easy to maintain and has strong scalability. Special functions can be customized and developed according to customer needs
