

Feature:

1. Newly designed streamlined antenna appearance
2. Fully consider a variety of installation methods: ceiling, wall-mounted
3. The wireless dedicated antenna is the receiving part of the wireless conference system, responsible for data communication between the wireless unit and the wireless intelligent conference center host
4. Adopting UHF digital wireless communication frequency band, combined with the digital conference system architecture, independently developed wireless anti-interference audio communication technology, to ensure the stability of the system
5. Communication frequency band: 650MHz~700MHz data communication
6. 5 groups of fixed communication frequency points are optional, without interference; support Multiple frequency points, you can freely choose from 200 frequency points
7. The antenna signal transmission distance radius can reach about 0-20m

Specification:

Maximum power consumption	6W
Communication frequency band	650MHz~700MHz
Wireless transceiver modulation	PLL phase-locked loop integrated control
Antenna	matching receiving antenna + control antenna
Security	AES advanced encryption standard
Color	white
Weight	790g
Size (mm)	340 (diameter)
Opening size (mm)	235 (diameter)
