

Feature:

1. Can realize serial port data conversion to TCP/IP
2. Support Modbus gateway function of Modbus TCP to Modbus RTU. Modbus gateway supports multiple Modbus clients to connect and read data at the same time, that is, multi-host function
3. Support 1 RS232 serial port and 1 RS485 serial port. Users connect to the network through a network cable, and the host computer can access 1 serial port through a virtual serial port or TCP protocol at the same time
4. Support TCP server, TCP client, UDP mode, UDP multicast. As a TCP server, it supports 11 TCP connections
