

Feature:

1. The voice interactive control panel is an intelligent voice assistant. It can be used with the central control host to freely control the lights, curtains, air conditioners and other equipment in the environment. The voice recognition is sensitive and the sound is clear. The trigger words of the voice assistant can be customized according to the user's habits
2. Using ARM CPU chip, advanced AI voice algorithm
3. Large memory space, flash can reach 512K
4. Supports up to 1000 customizable voice commands
5. High-precision pickup module, recognition rate is as high as 99%
6. Support multi-national voice recognition
7. Support intelligent voice response
8. Ultra-long-distance recognition, up to 30 meters away
9. Support unlimited cascading, large venues can cascade multiple voice controls, control wherever you go
10. Support POC remote power supply, standard 86 panel according, can be embedded in the wall and table
11. Industrial-grade chip, low power consumption, stable and safe, customizable trigger words
12. Use with the central control host

Specification:

Communication mode	RS485
Baud rate	115200
Power supply	DC12V
Temperature	Storage and use temperature: -20°~+70°C
Humidity	Storage and use humidity: 10%~90%
Power	3w
MTBF	78000 hours
