

Feature:

1. The wireless voice interactive controller is an intelligent voice assistant. It can be used with the central control host to freely control the lights, curtains, air conditioners and other equipment in the environment. The voice recognition is sensitive and the sound is clear. The trigger words of the voice assistant can be customized according to the user's habits. Built-in WiFi (two-way communication) wireless communication method can remotely control the central control host
2. Beautiful desktop appearance, can be placed arbitrarily, using ARM CPU chip, advanced AI voice algorithm
3. Large memory space, flash can reach 512K
4. Supports up to 1,000 customizable voice commands
5. High-precision pickup module, recognition rate is as high as 99%
6. Support intelligent voice response
7. Ultra-long-distance recognition, up to 30 meters
8. Support unlimited cascading, large venues can cascade multiple voice controls, and control wherever you go
9. Industrial-grade chip, low power consumption, stable and safe Customizable trigger words
10. Use with the central control host
11. Support wireless WIFI communication method
12. Built-in battery, ultra-long standby time

Specification:

Communication mode	TCP/IP
Speed	10M/100M
Power supply	DC5V
Temperature	Storage and use temperature: -20°C~+70°C
Humidity	Storage and use humidity: 10%~90%
Power	2w
