▶ Feature:

1. The 4-way volume controller is a 4-way volume controller with excellent audio modulation. By connecting with the host control system, it can realize the unique operation of left and right channel mute, volume, high and low bass lifting. It adopts DSP audio processing technology to provide users with excellent sound quality

2. NET control

3. Ethernet TCP/IP network control

4. Support programmable central control direct control

5. Support central control APP direct control

6. Programmable panel direct control

7. Up to 4 channels can be used at the same time

8. NET bus control, ID can be set by ID dial code

▶ Specification:

Communication method	NET, network
Sampling rate	48K
Input impedance	100KΩ
Output impedance	30Ω
NET address code	ID dial code
Control number	4
Frequency response	60Hz~20KHz (0db maximum)
Power supply	DC12V, NET
Signal-to-noise ratio	>90db
Maximum power consumption	4W/12V
