

Feature:

1. FT-KCON8S is a programmable control card that supports multiple control methods and can be flexibly applied to various sites, with independent software
2. ARM series CPU, 32-bit embedded processor
3. 4-way independent programmable infrared transmission interface, support control of multiple identical or different infrared devices
4. Support 3-way RS232/RS422/RS485 multiplexing, support 4-way IO, 8-way RELAY, 4-way infrared simultaneous access, users can program multiple control protocols and codes
5. Built-in Web server, host-free programming software, built-in modular event programming server
6. Support multi-platform simultaneous operation, support remote operation
7. Support network programming, support unlimited network expansion
8. Support local and remote multiple control methods

Specification:

Interface	3-way RS232/RS422/RS485 multiplexing, support 4-way IO, 8-way RELAY, 4-way infrared simultaneous access
Product weight	about 0.8KG
Maximum power consumption	20W
