

### Feature:

The Monitoring Control Panel is a recording and broadcasting extension device that allows for both manual directing control and real-time monitoring of recording quality. It can be embedded in a classroom blackboard wall or installed on a podium, with a compact size that minimizes space usage and allows teachers to operate it independently. The integrated 11.6-inch high-definition LCD touch screen displays the recording and directing interface, enabling teachers to manually switch live broadcast screens and start recording or streaming with a single button. This compact device is easy to connect and does not require a separate power supply; it connects to the main recording device via a standard CAT5E Ethernet cable, which transmits control signals and provides power from the main unit. This versatile monitoring and control panel is ideal for applications in micro-classroom recording, conference recording, and classroom recording when used with the main recording device.

### Specification:

Parameter	Specification
<b>VGA Input</b>	1x VGA-IN, connects to main unit' s VGA-OUT
<b>HDMI Input</b>	1x HDMI-IN, connects to main unit' s HDMI-OUT1
<b>RJ45 Control Port</b>	1x RJ45, supports RS232 and RS485 protocols, connects to main unit's COM port via CAT5E cable
<b>DC Power Input</b>	1x DC 48V, connects to DC 48V/1A power supply
<b>Dimensions</b>	Width x Height: 30.6 cm x 18.6 cm
