**FionTu**
方图集团

## ▶ Feature:

1. This product is a FionTu MBP series network center. The entire series adopts the ARM-A11 architecture, has powerful audio processing capabilities, and flexible audio processing algorithms

2. Intuitive GUI design, supports AC dual power supply redundancy backup, and perfectly supports various audio interconnections

3. This series of products is an ideal choice for audio system centers in conference centers, exhibition centers, entertainment venues, courts, churches, performing arts centers, stadiums, theme parks, and transportation hubs

4. Supports Mixer64X64 network audio and mixing

5. Supports FT-Designer software operating platform, unified debugging

6. Supports MBP-100 product full audio processor algorithm module

7. Four Gigabit Ethernet network interfaces, can realize line redundancy dual backup function

8. Support F-LAN protocol

9. The entire series supports dual power mode, power dual backup mode

10. Support UCI interface

11. Support RS232.RS485, 4-way GPIO and other external access control devices

12. Support USB devices

13. Standard 2U chassis design
