Feature:

1.The Magic Box is a special language noise reduction module for recording systems. It uses AI artificial intelligence voice and noise separation algorithms. It uses automatic gain (AGC) algorithm. No matter how far or close the speaker is from the microphone, it can achieve good recording effects. It can be used in teaching recording, science and technology courts, security monitoring, on-site interviews and post-production

2.Intelligent noise reduction, no loss of voice

3.Automatic gain, no matter how far the speaker is, it can achieve good and clear recording effects

4.Support 1 MIC/LINE input, 2 balanced terminal outputs

5.Use a dedicated power adapter

6.Support monitoring headphone output

7.Support +48V phantom power supply function

8.Support volume addition and subtraction
